

EUGENIC MARRIAGES

Will insure to this country a healthier and more intelligent family of the future and many a woman, obviously unfit for marriage, has had her health restored by the timely use of Lydia E. Pinkham's Vegetable Compound, the most successful remedy for female ills the world has ever known. Enormous quantities of roots and herbs are used annually in making this good old-fashioned remedy and no woman who suffers from female ills should lose hope until she has tried it.—Advertisement.

Splendid Remedy For Eczema

Also for Salt Rheum, Acne, Tetter, Psoriasis and Other Skin Troubles.

After using S. S. S. for a while, the characteristic marks of all skin troubles change completely. When eczema has become chronic the lower skin loses its power to absorb impurities and thus they continue to gather in the weak spots or those already attacked. The action of S. S. S. is that of an antidote, and this fact has been demonstrated time and time again in the most severe forms of weeping eczema. Its influence in the tissues where the they arteries transfer the red blood for the worn-out blood to the veins is quite remarkable and goes on constantly with every tick of the clock—the beat of the heart. And new skin is thus caused to form while the germs of irritating influences that cause eczema are scattered and their harmful nature entirely suspended. S. S. S. has a wonderful tonic influence in the blood because it contains no "dope," is entirely free of any mineral drugs or any other drugs except the remarkable medicinal effect of the pure vegetable products of which it is made. Few people realize how harmful are many of the strong, crude ointments that used to be in favor before they learned that S. S. S. is safe, speedy and sure. Ask at any drug store for a bottle of S. S. S. Give it a good trial and you will soon see a decided improvement in your skin. Write to The S. S. S. Co., 338 West 12th St., St. Paul, Minn., for a free trial and new book on skin or blood trouble.

FOR UNSIGHTLY COMPLEXIONS USE RESINOL

Pimples and blackheads disappear, unsightly complexions become clean, clear, and healthy, and hair health and beauty are promoted by the regular use of Resinol Soap and an occasional application of Resinol Ointment. These soothing, healing preparations do their work easily, quickly and at little cost, when even the most expensive cosmetics and complicated beauty treatments fail. Resinol is not an experiment. It is a doctor's prescription which proved so wonderfully successful for skin troubles that it has been used by other doctors all over the country for nine years. No other treatment for the skin has before the public can show such a record of professional approval. Every drugstore sells Resinol Ointment (50c) and Resinol Soap (25c); but for trial size, free, write to Dept. K.K., Resinol, Baltimore, Md. Avoid worthless substitutes offered by unscrupulous dealers.

ARE TO STUDY METHODS IN WEST VIRGINIA

Federal Department to Investigate Road Building Systems in Seven Counties.

WASHINGTON, D. C., May 18.—Detailed studies of local road building systems in one hundred counties are now being carried on by the Department of Agriculture in co-operation with state highway departments and local authorities. The following counties in West Virginia have been designated by the state highway officials as those in which the investigation should be made: Cabell, Fayette, Jefferson, McDowell, Ohio, Webster and Wyoming.

Purpose of Study.
The purpose of this study is to detect in existing local methods of building and maintaining roads which will aid the state authorities to put local road management on a systematic basis. The co-operating state authorities have been asked to designate counties that present typical and exceptional features as to topography, character and road materials, methods of construction and maintenance, administrative organization, methods of road financing and traffic conditions. From these lists 100 counties will be selected, and in these counties the Division of Road Economics will make intensive studies.

This investigation is prompted by the fact that there is at present very little knowledge as to the most effective and economical methods by which a county can develop its roads. At present the methods of financing local road improvements vary from calling on farmers for a certain number of days labor in lieu of a road tax, or the use of county prisoners in road construction, to bond issues or maintenance of roads from dram-shop license funds.

The department will study all of these systems with the view to determining what system or combination of systems works best in actual practice. There is, moreover, at present no standard system of keeping accounts for road building and maintenance, and as a result, while some counties know to a penny the purpose for which money was spent, others have no definite check or reporting system. Among various counties with the same conditions, cost for excavation or other labor is anything but uniform and many counties, because of the absence of definite knowledge, fail to use local and cheap materials and construct roads which are unnecessarily expensive for their purpose, or which will wear out before the bond issues are redeemed. The investigation will include a careful study of the use of convict labor in road construction.

In connection with the scientific study, the department's highway engineers will advise freely with local officials as to improvements, and thus give each county visited the advantage of direct co-operation, engineering supervision and assistance. These investigations, it is believed, will yield important economic data bearing especially on the benefits and burdens of road improvement and showing the extent to which financial outlay under given typical conditions is justifiable.

The heads of state highway departments are manifesting great interest and are co-operating cordially in this work. Their data when obtained will be published and thus made accessible to all county and state road officials.

NEW CHART

Of the Delaware River Shows All Recent Changes in Shore Lines.

WASHINGTON, D. C., May 18.—The United States Coast and Geodetic Survey, Department of Commerce, has published under date of April, 1914, a new chart, No. 296, of the upper part of the Delaware river from Philadelphia to Trenton. This chart, which shows all recent changes in shore lines, depths, improvements, aids to navigation, etc., replaces a plan on a smaller scale which appeared formerly on chart No. 126. The present chart is on a scale of 1-40,000 whereas the old plan was on a scale of 1-80,000, or one-half that of the present chart. The extensive improvements made by the United States army engineers and the resulting increase in traffic have caused a large demand for this new chart.

General Washington's famous crossing of the Delaware was made at McKinley's Ferry, nine miles above Trenton. This locality is beyond the limits of this chart.

A draft of twelve feet can now be carried to Bordentown, the entrance to the Delaware and Raritan canal, and beyond, through an improved channel to the wharves of Trenton. The greatest draft that can be taken through the Delaware and Raritan canal is seven feet. The locks are 210 feet long and have a clear width of 23 feet. Before the improvement by the United States engineers only three to six feet could be carried from Bordentown to Trenton through a channel so obstructed by rocks as to be practically unfit for navigation. Fifty feet clear at mean high water can be carried under the Pennsylvania railroad bridge at Fisher's Point without opening the draw.

The chart contains a sub-plan of the vicinity of Trenton on a scale of 1-20,000. Soundings are in feet at mean low water and heights in feet above high water. The tide rises 5.4 feet at Philadelphia and four feet at Trenton. The aids to navigation which have been recently changed, are corrected to date of issue.

Easy & Practical Home Dress Making Lessons

Prepared Especially For This Newspaper by Pictorial Review

THE BLOUSE DISTINCTIVE.

An unusually pretty blouse in absolute batiste, having a vest of all-over lace and sleeves cut in one piece. It is one of the latest French models.

Very distinctive blouses are being displayed at this season, and they are carried out in soft, semi-transparent materials like batiste, liberty satin, china silk, etc. Lemon, absinthe, mustard, rose, all of the coral shades and blue, ranging from marine to Labrador, are the smart shades for these blouses. Absinthe is used for this model, which has a surprise front and a vest of all-over lace of rather heavy design. The elbow sleeves are trimmed with double ruffles of accordion pleated batiste.

To make the waist will require 2 1/2 yards of 27-inch material, with 1 1/2 yards of lining and 3/4 yard all-over lace for the vest and an equal quantity of double frilling for the sleeves. The cutting of these one-piece waists is a most important matter and requires a Pictorial Review pattern No. 5698. Size 32, 34, 36, 38, 40 and 42 inches bust. Price, 15 cents.

To obtain this pattern fill out this coupon and enclose 15 cents, in stamps or coin. Be sure to state number of pattern and size, measuring over the fullest part of the bust. Address Pattern Department, care Daily Telegram.
